

News Release

Free CAD application drawings from the internet assure accurate detailing

For over 20 years Technical Graphics Limited has been at the forefront in providing building component manufacturers with accurate Computer Aided Design application drawings of their products in industry standard databases. As an integral part of their promotional activity, manufacturers have distributed these databases for utilisation by practitioners in the architectural and construction industries.

Terry Holding, Technical Graphics Managing Director explains, "From the onset, our FastrackCAD database service has been very popular with manufacturers and practitioners alike. By perfecting the creation of accurate layered 2D and 3D application drawings within databases, over the years we have proved their promotional value to manufacturers and their time-saving benefits to practitioners.

Since year 2000 we have made the FastrackCAD databases freely available from our website www.fastrackcad.com. As they are compatible with commonly used CAD drafting and information systems, most of the leading architects, building contractors, consulting engineers, surveyors and planning authorities now utilise this valuable facility with over 1000 drawings downloaded registered each working day. Busy drawing office managers and component specifiers have long discovered that drafting time is dramatically reduced and accuracy assured when a FastrackCAD database is available. As a result over 6000 practitioners are registered with our company, including most of the UK's top architectural practices."

Many of the FastrackCAD databases are also supplied on specially branded CDs which in many cases include the manufacturer's interactive electronic literature in addition to the drawings.

In another major expansion, the company now offer manufacturers a CAD based illustration service that provides vectored application product views for coloured hard copy and digital promotional, technical and instruction literature. Manufacturers are finding its essential vectored line work is used in their publications, as this ensures small file sizes and clear line work on the internet. For more information on this service please contact Terry Holding via tholding@techgraf.co.uk
