Illuminated drainage channels – Walk of Light

Based in their popular FASERFIX® SUPER KS 100 channels, Hauraton have integrated a 12 volt, LED lighting system into all the gratings offered in the KS range. The system provides aesthetic illumination at ground level for public areas such as leisure facilities, piazzas, courtyards and walkways. The system can reduce the requirement for general street lighting and can even be used to provide safe guide paths in crowded places.

Easily installed, the LED elements come pre-assembled into the gratings and are securely connected together with watertight plugs. Tim Connolly, Sales Director at Hauraton explains, “Even the frequency and duration of the colour display can be set remotely for the whole channel run. The LEDs can be set to any colour from the RGB (Red Green Blue) spectrum allowing endless coloured effects for the urban landscape designer to exploit”.
