erazzr® renovates grimy surfaces around the home

The erazzr® block has been specifically developed to safely erase stubborn grime, scuff marks, pollution and algae stains from u-PVC or painted wood window and door frames, conservatory and skylight frames and other plastic coated structures where using abrasive powder or creams would certainly damage the surface. In addition it can be used to remove tide marks and grime from baths, basins and most kitchen surfaces or even renovate plastic garden and patio furniture. It can erase grime from telephones and computer keyboards; erazzr will even remove permanent marker ink from many hard surfaces and crayon from painted walls.

Amazingly, erazzr is simply activated by the power of water – no abrasive powders, detergents or chemical cleaners are incorporated or necessary.

An erazzr block looks like a sponge but it should not be used like one. It works more like a large pencil rubber. In combination with water, it magically erases - rubs away grime and marks.

When using erazzr different methods are employed each tailored to give the best results.

Literature for this magic eraser is on www.nbs-home.co.uk where the product can be conveniently purchased.
